

This diagram illustrates the mechanical configuration of the system, showing the relationship between the central shaft and the housing components.

The assembly consists of several key parts, including the central shaft, the housing, and the connecting arm. The diagram shows how these components are interconnected to facilitate the system's operation.

The central shaft is supported by bearings and is connected to the housing via the horizontal arm. This arrangement allows for the transmission of motion or force between the shaft and the housing.

The housing is designed to protect the internal components and provide a stable base for the assembly. The diagram shows the housing's structure and its connection to the central shaft.

The overall design is compact and efficient, suitable for applications requiring precise mechanical control.
